Education

Western Mindanao State University

BS, Mass Communication/Media Studies — Graduated

Work History

Symph — Remote

Fullstack Software Engineer — Nov 2020 - Present

Built and maintained client web products across finance, retail, HR and healthcare, so teams and customers could get their daily work done in one place.

Financial Services Platform

Jan 2021 - Nov 2025

- Maintained a financial services platform for nearly five years using React, TypeScript, Node.js and MySQL on Google Cloud, so branch staff could verify customers, transfer money and run reports smoothly.
- Built NestJS services for transactions, customer checks and PDF/CSV reports on Google Cloud with CI/CD, so staff could review balances and fund transfers.
- Built the online shop checkout with Next.js and NestJS, including MCash and PayMongo payments, so customers could pay and pick up orders.
- Maintained the MySQL stored procedures behind transfers and reports while mentoring teammates, reviewing code and acting on feedback, so reports rolled up by branch, area and region.

Content Management Platform

Jan 2025 - May 2025

- Led a content platform project using Strapi, TypeScript and React, collaborating with the client's team and guiding developers, so staff could manage marketplace content from one screen.
- Handled Google Cloud deployment with App Engine, Cloud Build CI/CD, IAM and logs, so updates went live safely.

HR and Payroll Platform

Feb 2026 - Jun 2026

- Led AI-augmented development of an HR and payroll system using Next.js, TypeScript, Firebase and Google Cloud CI/CD, with daily Agile standups and client check-ins, so companies could manage staff, leave and payroll in one place.

Distributor Operations Platform

May 2026 - Jun 2026

- Led AI-augmented development of an operations tool using Next.js, TypeScript and Firebase on Google Cloud with CI/CD, setting priorities with the team and explaining choices to non-technical staff, so sales teams could track accounts and reports in one place.
