Med Aduh

Full-stack developer with nearly six years of experience building software that people use every day, from money transfers and online shops to HR and payroll. I turn what teams ask for into tools that work, and I use AI tools to deliver faster and more reliably.

EXPERIENCE

Symph

Remote

Software Engineer

Nov 2020 - Present

- Built and maintained web products for clients across finance, retail, HR, healthcare and more, so their teams and customers could do their daily work in one place.

Financial Services Platform

Financial operations and reporting workflows

Software Engineer

Jan 2021 - Nov 2025

- Maintained a financial services platform for nearly five years, covering customer verification, money transfers, daily reports and receipts, so branch staff could finish their daily work more smoothly.
- Built the behind-the-scenes services for transactions, customer checks and reports with PDF and CSV output, so staff could review bank and vault balances and fund transfers.
- Built the online shop checkout and payment flows, including MCash and PayMongo payments with one-time-code checks, so customers could pay for and pick up their orders.
- Maintained the database logic behind transfers, customer checks and reporting, so reports could roll up by branch, area and region.

Content Management Platform

CMS and marketplace operations platform

Project Lead / Software Engineer

Jan 2025 - May 2025

- Led a content platform project and guided fellow developers, coordinating with the client's team, so their staff could review and manage marketplace content from one admin screen.
- Handled the cloud deployment and automated builds, so updates could go live safely.

Other Client Platforms

HR, payroll and distributor operations

AI Product Engineer

Feb 2026 - Jun 2026

- Led development of an HR and payroll system with daily Agile standups and regular check-ins with the client, so companies could manage employees, time off and payroll in one system.
- Led an operations tool, setting priorities with the team and explaining technical choices to non-technical staff, so sales teams could track accounts, visits and distributor reports in one place.

SKILLS & INTERESTS

Languages and frontend: TypeScript, JavaScript, SQL, React, Next.js

Backend, cloud, and data: Node.js, NestJS, Firebase, Google Cloud, MySQL, PostgreSQL, Drizzle ORM, Strapi

Product engineering: RBAC/CASL, forms and PDF workflows, reporting, exports, automation, testing
